Performance

ORACLE CERTIFIED PARTNER

Performance Considerations

- ◆ Patched Current
- ◆ Pinning
- ◆ Statistics
- ◆ Diagnostics

Patched Current

- ◆ Latest, greatest optimized code
- ◆ Interdependencies between modules
- ◆ New functionality and features
- ◆ Changed functionality

Pinning

- ◆ Oracle Applications requires space in the ORACLE System Global Area (SGA) for stored packages and functions; if SGA space is fragmented, there may not be enough space to load a package or function; you should pre-allocate space in the SGA shared pool for packages, functions, and sequences by "pinning" them
- ◆ Pinning objects in the shared pool can provide a tremendous increase in database performance, if it is done correctly; since pinned objects reside in the SQL and PL/PLSQL memory areas, they do not need to be loaded and parsed from the database, which saves considerable time
- ◆ PIND Pinning Toolkit – MetaLink 301171.1

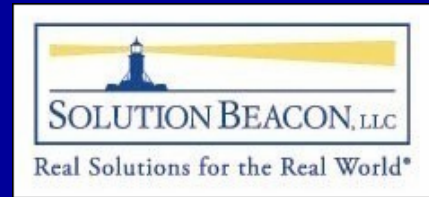

Statistics

- ◆ The Concurrent Program Gather Schema Statistics should be run weekly (at a minimum) using ALL, 99 and NOBACKUP values unless time prohibits
- ◆ Minimum Gather Statistics should be run weekly against all non-sys/system objects using 10%
- ◆ Additionally, a separate statistics gathering process should be run daily on high transactions modules (e.g. AP, PO, OE, ONT, PA, PAY) during low processing periods
- ◆ Using any value larger than 50 will force a compute vs. an estimate for statistics; any value < 50 only provides estimated statistics. Computed statistics provide a significant performance improvement for Application modules
- ◆ FND_STATS Required – MetaLink 141532.1

Diagnostics

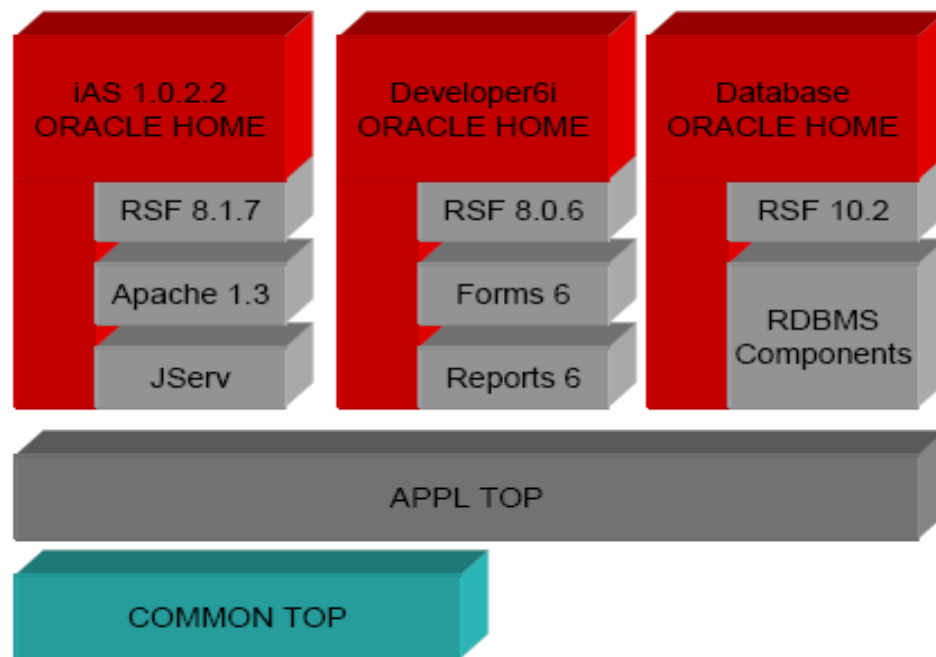

- ◆ Diagnostics 2.5 RUP A
- ◆ Remote Diagnostic Agent (RDA) 4.7
- ◆ Application Collection Tool (ACT)
- ◆ BDE Scripts
- ◆ Statspack
- ◆ TUMS-MP, Technology Validation Utility
